Executive Summary

SwiftMatch is an assessment-first recruitment platform built for the Philippine labor market. We flip the hiring model on its head: instead of applicants endlessly searching and spraying résumés, verified talent gets **spotted** by employers based on objective, multi-dimensional evidence of capability.

Traditional job boards optimize for volume, not fit. Employers drown in unqualified applications; qualified candidates are filtered out by keyword-matching software before a human ever reads their story. SwiftMatch replaces the résumé-keyword lottery with a structured evaluation engine that scores every candidate across five dimensions — **Knowledge & Expertise, Personality & Work Style, Cultural Fit, Critical Thinking, and AI Readiness** — across 22 industries including the fast-growing Virtual Assistance sector.

INDUSTRIES COVERED

5

ASSESSMENT DIMENSIONS

#1

GET-SPOTTED MODEL

The Opportunity

The Philippines has a workforce of **~49 million**, one of the world's largest English-speaking talent pools, a globally dominant **BPO industry (~1.7M employed)**, and an explosively growing remote / virtual-assistance economy serving US, AU, and UK clients. Yet hiring infrastructure remains stuck on résumé-keyword job boards. SwiftMatch is positioned to become the trusted, skills-verified layer between this talent and the employers who need it.

Business Model

SwiftMatch operates a **freemium two-sided model**. Applicants build a verified profile and take assessments for free. A **Premium tier** unlocks the full candidate analytics report, career-transition recommendations, and priority visibility. Employers pay for access to the ranked candidate pool, advanced matching, custom per-job assessments, and a hiring pipeline with built-in pass/fail decisioning and candidate notifications.

The ask: SwiftMatch is raising a pre-seed round to convert a live MVP into a revenue-generating platform — funding go-to-market, employer sales, assessment-science validation, and email/notification infrastructure across the first 18 months.

Company Overview

MISSION

To make hiring fair and fast by letting verified skills — not connections or keyword luck — decide who gets spotted.

VISION

To become the Philippines' default trust layer for talent: the place where every serious candidate is objectively measured and every employer hires with confidence.

Tagline

"Don't search. Get spotted."

The tagline is the product strategy. SwiftMatch inverts the burden of effort: candidates invest once in a rich, verified profile and assessment record, and from then on the platform surfaces them to relevant employers automatically.

Core Values

- **Evidence over assertion.** Every claim on a SwiftMatch profile is backed by a structured assessment or verified record.
- **Fairness by design.** Randomized question banks, cooldowns, and server-side grading prevent gaming and bias.
- **Filipino-first.** Industries, roles, locations, salary norms, and labor context are built for the Philippine market, not bolted on.
- **Dignity in rejection.** Even candidates who aren't selected receive constructive next steps — training and alternative-industry guidance.

Current Status

SwiftMatch has a **live MVP** with a complete applicant journey (10-step profile wizard, résumé auto-fill, five assessments), an employer-facing candidate analytics report with ranked pools and per-job custom assessments, and a premium subscription gate. A public buildathon site and a 2-minute product walkthrough video support market validation and fundraising.

The Problem

Hiring in the Philippines is high-volume, low-signal, and exhausting for both sides of the market.

For Job Seekers

- **The application black hole.** Candidates submit dozens of applications and hear nothing. Résumé-keyword filters reject qualified people before a human reviews them.
- **No way to prove real skill.** A self-written résumé can't demonstrate critical thinking, cultural fit, or AI fluency. Strong candidates with weak résumé-writing skills lose out.
- **Wasted effort.** The same person re-enters the same data into ten different portals, tailors ten résumés, and still competes on presentation rather than ability.

For Employers

- **Application overload.** A single posting attracts hundreds of unqualified applicants; screening is manual and slow.
- **Poor signal.** Résumés don't predict on-the-job performance, retention, or team fit — leading to costly mis-hires.
- **No standardized comparison.** Two candidates can't be objectively compared because there's no common measurement.
- **AI blind spot.** As AI reshapes every role, employers have no way to measure a candidate's actual AI readiness.

The core gap: The market has plenty of *job boards* (places to post and apply) but no trusted *measurement layer* (a way to objectively know who is actually qualified and a good fit). SwiftMatch is that layer.

The Solution

SwiftMatch turns every candidate into a structured, comparable, verified data profile — and surfaces the best-fit people to employers automatically.

How It Works

1. **Build once.** Candidates complete a guided 10-step profile (with résumé auto-fill via AI) capturing skills, history, references, preferences, and an intro video.
2. **Get measured.** Candidates take industry-scoped assessments across five dimensions. Questions are randomized and graded server-side for integrity.
3. **Get spotted.** Employers browse a ranked candidate pool, run per-job custom assessments, compare candidates on a common scale, and make pass/fail decisions.
4. **Close the loop.** Passed candidates move into the hiring pipeline and are notified; others receive a respectful message with training and alternative-industry suggestions.

The Five-Dimensional Assessment Engine

KNOWLEDGE & EXPERTISE

Industry-specific competency, with randomized difficulty-weighted questions and role-prioritized banks.

PERSONALITY & WORK STYLE

DOPE Bird / MBTI routing based on role and seniority to capture interpersonal vs. cognitive style.

CULTURAL FIT

Alignment with team and workplace norms, scored per industry.

CRITICAL THINKING

Scenario-based reasoning and judgment under realistic constraints.

AI READINESS

A 50-question, industry-scoped bank measuring practical fluency with AI tools — the dimension legacy job boards entirely ignore, and the one employers increasingly demand.

Why It Wins

SwiftMatch is not a better job board — it is a **different product category**. By owning objective measurement, it becomes the trusted source of truth that both candidates and employers anchor on, creating a defensible two-sided network effect.

Product & Technology

Applicant Experience

- **Résumé / CV auto-fill** — upload a PDF/Word résumé; AI extracts and pre-populates the profile, removing the biggest onboarding friction.
- **10-step guided profile wizard** — personal info, contact, skills (autocomplete), employment history, certificates, references, social links, job preferences, pre-assessment, and intro video.
- **Five assessments** across 22 industries, with random question selection, fairness cooldowns, and instant scored results.
- **Personalized dashboard** — profile summary, recommended job matches, assessment results, and recommended training to close skill gaps.

Employer Experience

- **Candidate Analytics Report** — a ranked candidate pool scored across all five dimensions, with radar comparisons and pool benchmarks.
- **Job-fit matching** — candidates ranked by compatibility with a specific posting across industry, role, level, and assessment factors.
- **Custom per-job assessments** — recruiters build their own scored questions (multiple-choice and text) graded automatically.
- **Pass / Fail decisioning** — a built-in hiring decision control on each candidate, designed to drive pipeline automation and candidate notifications.

Technology Foundation

LAYER	STACK	WHY IT MATTERS
Frontend	React, Vite, Tailwind, Framer Motion	Fast, polished, mobile-friendly UX
API	Express, TypeScript, Zod validation	Type-safe, contract-first reliability
Data	PostgreSQL, Drizzle ORM	Structured, queryable talent graph
AI	GPT via managed integration	Résumé parsing & future matching intelligence
Integrity	Server-side grading, randomized banks	Assessment results that employers can trust

A contract-first OpenAPI architecture and shared component libraries let the team ship features across web, mobile, and marketing surfaces quickly and consistently.

Market Analysis

The Philippines is one of the most attractive talent markets in the world — and one of the most underserved by modern hiring technology.

Market Sizing

LAYER	DEFINITION	SCALE
TAM	Total PH recruitment & HR-tech spend, all employers & the ~49M workforce	Billions USD annually
SAM	Digitally-hiring SMEs, BPOs, and remote-staffing firms recruiting online	Hundreds of thousands of employers
SOM (3-yr)	Premium applicants + paying employers across priority verticals (BPO, IT, VA, healthcare)	Initial beachhead segment

Tailwinds

BPO ENGINE

~1.7M employed and growing; constant, high-volume, screen-heavy hiring — ideal for assessment-based ranking.

VA BOOM

Explosive remote virtual-assistance economy serving overseas clients who desperately need verified, trustworthy talent.

AI SHIFT

Every role now needs AI fluency. Employers have no way to measure it — except SwiftMatch.

Target Segments (Beachhead → Expansion)

1. **Virtual Assistance & remote staffing** — high pain around trust/verification, overseas-funded budgets, fast adoption.
2. **BPO / Call Center** — massive volume hiring where standardized scoring saves real money.
3. **Technology / IT & Healthcare** — high-value roles where mis-hires are expensive and AI-readiness matters.
4. **Long tail** — the remaining 18 industries already supported on the platform.

Business Model

A freemium, two-sided model: free access builds the talent graph; premium and employer subscriptions monetize the trust it creates.

Revenue Streams

STREAM	BUYER	WHAT THEY GET	MODEL
Applicant Premium	Job seekers	Full analytics report, career-transition recommendations, priority visibility	Monthly subscription
Employer Access	Employers / recruiters	Ranked candidate pool, job-fit matching, custom assessments, hiring pipeline	Tiered subscription
Per-Hire / Placement	Employers	Success-based fee on confirmed hires	Transaction fee
Assessment Credits	Employers	Volume custom-assessment runs for high-throughput hiring	Usage / packs
Training Marketplace	Both sides	Recommended courses to close skill gaps (the "bench")	Referral / revenue share

Why Freemium Works Here

- **Supply first.** Free assessments attract candidates, building the verified talent graph that makes employer subscriptions valuable.
- **Natural upgrade triggers.** Candidates see a blurred premium report and a clear reason to upgrade; employers hit value the moment they need to compare or shortlist.
- **Compounding moat.** Each assessment adds proprietary, structured data that competitors cannot replicate by scraping résumés.

Unit-economics thesis: Candidate acquisition is cheap (free, viral, assessment-driven). Revenue concentrates on the employer side, where willingness-to-pay is highest and a single avoided mis-hire pays for the subscription many times over.

Go-to-Market Strategy

Phase 1 — Seed the Talent Graph (Months 0-6)

- Launch free assessments in the **Virtual Assistance & BPO** verticals where candidate demand for credible verification is highest.
- Drive candidate acquisition through social proof ("get your verified SwiftMatch score"), community partnerships, and the shareable results report.
- Goal: a critical mass of verified, scored candidates that makes the employer side immediately valuable.

Phase 2 — Monetize the Employer Side (Months 6-12)

- Direct sales to **remote-staffing agencies, BPOs, and high-volume SMEs**.
- Land-and-expand: free trial of the candidate pool → paid access → custom assessments → placement fees.
- Activate pass/fail pipeline + automated candidate notifications as a retention and stickiness driver.

Phase 3 — Scale & Defend (Months 12-24)

- Expand across all 22 industries; introduce the training marketplace and per-hire monetization.
- Launch mobile app for candidates to maximize reach in a mobile-first market.
- Build employer-brand and content moat: "SwiftMatch-verified" becomes a recognized signal.

Acquisition Channels

CANDIDATE SIDE

Organic/viral score-sharing, social media, school & community partnerships, SEO on role/industry pages.

EMPLOYER SIDE

Founder-led direct sales, staffing-agency partnerships, referral incentives, case studies on reduced time-to-hire.

Competitive Landscape

SwiftMatch competes adjacent to job boards but owns a category they don't: trusted, multi-dimensional skills measurement.

CATEGORY	EXAMPLES	THEIR MODEL	SWIFTMATCH EDGE
Job boards	Generic PH/global boards	Post & apply, keyword search	We measure & rank, not just list
Pro networks	Professional social networks	Self-reported profiles	Verified, scored, gameable-resistant
Staffing agencies	VA / BPO staffing firms	Manual, opaque, slow	Standardized, fast, transparent scoring
Assessment tools	Standalone test vendors	One-dimensional, employer-only	Five dimensions + two-sided marketplace

Defensibility

- **Proprietary data moat.** A growing graph of structured, verified assessment results across 22 industries — impossible to scrape or fake at scale.
- **Two-sided network effects.** More verified candidates → more employer value → more candidates.
- **Assessment science.** Industry-scoped, role-prioritized, integrity-protected banks are hard and slow for competitors to replicate credibly.
- **Local depth.** Built natively for Philippine industries, roles, locations, and salary norms.

Operations & Team

Operating Model

SwiftMatch is a lean, technology-led operation. The platform automates the highest-cost parts of recruiting — screening, scoring, ranking, and candidate communication — so the team can stay small while serving a large two-sided market.

Key Functions to Build

FUNCTION	ROLE OF THE TEAM	PRIORITY
Engineering & Product	Platform reliability, mobile app, matching intelligence	High
Assessment Science	Validate question banks, scoring fairness, predictive value	High
Employer Sales	Land-and-expand with staffing firms, BPOs, SMEs	High
Growth / Community	Candidate acquisition, content, partnerships	Medium
Trust & Support	Verification integrity, candidate experience	Medium

Milestones Achieved

- Live MVP: full applicant journey, five assessments, employer analytics report.
- 22-industry coverage including the high-growth Virtual Assistance vertical.
- AI Readiness assessment shipped — a differentiated, future-facing dimension.
- Employer pass/fail decisioning groundwork laid for pipeline automation.

Financial Projections

An illustrative 3-year model. Figures are directional planning assumptions for a pre-seed company, not guarantees.

Revenue Build (Illustrative)

METRIC	YEAR 1	YEAR 2	YEAR 3
Registered candidates	25,000	120,000	400,000
Premium applicants (paid)	750	6,000	24,000
Paying employers	40	220	700
Applicant Premium revenue	\$27K	\$216K	\$864K
Employer subscription revenue	\$96K	\$660K	\$2.52M
Placement & other revenue	\$12K	\$120K	\$520K
Total revenue	\$135K	\$996K	\$3.90M

Assumes ~\$3/mo blended applicant premium and ~\$200/mo blended employer subscription, conservative conversion (3% applicant, employer land-and-expand). Currency in USD for investor comparability.

Cost Structure

TEAM

Engineering, assessment science, sales — the largest line item early.

ACQUISITION

Employer sales & candidate growth; CAC kept low by viral free assessments.

INFRASTRUCTURE

Hosting, AI inference, email/notifications — scales sub-linearly with users.

Path to Profitability

Candidate-side costs stay low (free, viral). Gross margin is high (software + data). As employer ARR compounds and placement fees layer on, the model crosses into profitability as employer revenue outpaces a deliberately lean cost base — targeted around the Year 2-3 transition.

Funding & Roadmap

The Ask

SwiftMatch is raising a **pre-seed round** to take a live MVP to repeatable revenue. Capital is allocated to the highest-leverage gaps between "it works" and "it sells."

Use of Funds

AREA	WHAT IT FUNDS	ALLOCATION
Product & Engineering	Mobile app, matching intelligence, pipeline automation	35%
Employer Sales & GTM	Founder-led sales, partnerships, candidate growth	30%
Assessment Science	Validate banks, scoring fairness, predictive value	15%
Infrastructure	Email/notifications, scaling, AI inference	12%
Operations & Buffer	Legal, compliance, runway buffer	8%

Roadmap

HORIZON	FOCUS	KEY DELIVERABLES
Q1-Q2	Monetization rails	Server-side premium gate, email/notification engine, pass/fail pipeline live
Q3-Q4	Employer revenue	Employer subscriptions, custom-assessment packs, first placement fees
Year 2	Scale	Mobile app, training marketplace, all-industry expansion, AI matching
Year 3	Category leadership	"SwiftMatch-verified" as a market standard; regional expansion exploration

Immediate next builds: (1) move the premium gate server-side for a real paywall; (2) wire pass/fail decisions to candidate email notifications — hiring-process invite on pass, respectful thank-you + training/industry guidance on fail.

Risk Analysis & Mitigation

RISK	IMPACT	MITIGATION
Cold-start (two-sided)	Hard to attract employers without candidates and vice versa	Supply-first: free viral assessments seed the candidate graph before employer monetization
Assessment gaming	Cheating erodes employer trust	Randomized banks, server-side grading, cooldowns; ongoing integrity investment
Assessment validity	Scores must predict real performance	Dedicated assessment-science function; iterate banks against hiring outcomes
Employer willingness-to-pay	Revenue concentration risk	Tie pricing to avoided mis-hire cost & time-to-hire savings; land-and-expand
Incumbent response	Job boards add testing	Data moat + two-sided network + local depth are hard to replicate quickly
Data privacy / compliance	Sensitive candidate data	PH Data Privacy Act alignment, secure handling, server-side trust boundaries

Closing

SwiftMatch is built on a simple, durable insight: in a market overflowing with talent and starved of trust, whoever owns objective measurement owns the hiring relationship.

With a live product, a differentiated assessment engine, deep Philippine-market fit, and a clear path from free supply to employer revenue, SwiftMatch is positioned to become the verified talent layer for one of the world's most important workforces.

Don't search. Get spotted.
